

Alpha 1-Antitrypsin Preparation as well as a
Method for Producing the Same

A b s t r a c t :

A native, chromatographically purified $\alpha 1$ -AT preparation having a purity of at least 0.7 PU/mg protein and a relative plasma $\alpha 1$ -AT activity of at least 120% is disclosed. The ratio of active to inactive $\alpha 1$ -AT is higher than in plasma.

Furthermore, a method of producing this preparation is disclosed, as well as the use of a carrier material, e.g. an inorganic carrier material such as hydroxylapatite for separating active $\alpha 1$ -AT from inactive $\alpha 1$ -AT.
